

Is preparing data for reports too time-consuming?

- DATA INPUT FOR REPORTS IS VERY TIME-CONSUMING** – INPUT OF SEVERAL TYPES OF DATA (e.g. LIST REPORTS) CANNOT BE AUTOMATED?
- GENERATING THE DATA REQUIRED FOR REPORTS INVOLVES TIME CONSUMING CALCULATIONS** – GENERAL PURPOSE TOOLS (E.G. EXCEL) ARE TOO SLOW?
- RESULTS HAVE TO BE PROCESSED MULTIPLE TIMES TO BE USABLE** – DO DATA REQUIRE SPECIFIC SELECTION AND PARTITION INTO PERIODS AND SUBJECTS?

Is there a need to repeat the same actions every time?

- EACH REPORTING PERIOD REQUIRES THE REPETITION OF ALL CALCULATIONS** – SOME PROCESSES CANNOT BE FULLY AUTOMATED?
- GETTING THE CORRECT RESULTS REQUIRES THE USER TO MANUALLY CORRECT DATA SETS AND FORMULAS** – DO DATA TABLES NEED CONSTANT DATE OR ROW ADJUSTMENTS?

Why not ask about aSISSt MAPPING MODULE?

Do reporting data from multiple sources require aggregation?

DATA ARE GATHERED FROM DIFFERENT SUBSYSTEMS AND THE REPORT SHOULD SHOW AGGREGATED DATA – IS THERE A NEED TO SUM AND SORT DATA FROM THE MAIN DATABASE, CREDIT REGISTER OR DEPOSIT REGISTER?

FILLING SOME REPORTS CANNOT BE AUTOMATED, BECAUSE DATA ARE GATHERED FROM DIFFERENT TABLES AND HAVE VARIED STRUCTURE – DO TABLES HAVE DIFFERENT HEADINGS, ARE ROWS SORTED BY DIFFERENT CRITERIA (E.G. NAME, TYPE, DATE, ETC.)?

Why not ask about aSISSt MAPPING MODULE?

BENEFITS OF USING aSISSt MAPPING MODULE

- Full automation of fetching all types of reports (including list reports) with data gathered directly from files generated by the banking system, or other types of files.
- One tool can handle all types of reports, and can be used for entire report or just its part.
- No more data inconsistencies caused by manual calculations or data input. All the calculations are automated, based on precisely selected parameters.
- User-friendly and efficient management of mappings.
